EVENTS

Epoch's Co-Chief Investment Officers Bill Priest and David Pearl, and Global Investment Strategist Kevin Hebner kicked off our new format quarterly webinar, discussing:

- **Global Macro:** deceleration or recession?
- **China Trade War:** winners and losers, mostly losers
- **From QE to QT:** influence on equities and other assets

Tuesday, January 15, 2019

Replay and presentation available on

www.eipny.com

Spotlight: *Utilities and Growth: Contradictory? We don't think so.*

A conversation with Michael Jin, CFA, Managing Director, Senior Research Analyst

QUESTION. *Some investors consider utilities a low-growth industry. Do you agree with that?*

ANSWER. That perception is based on the fact that electricity demand has been mostly flat since the global financial crisis (GFC), even as the economy grew. This was due, mainly, to energy conservation efforts, such as the adoption of LED and CFL light bulbs and efficiency improvements in home appliances. As such, it appears logical to conclude that utility companies' earnings and/or cash flow growth must have been nonexistent or very low at best. On the contrary, many utility companies have delivered

Quarterly Investment Update: *Outlook for 2019: On Margins, Multiples and Macron*

By William W. Priest, CFA, CEO, Co-CIO and Portfolio Manager

While equity markets experienced a challenging and choppy 2018, this year has responded with a buoyant leap off the blocks. Although the ranks of optimists are gradually dwindling, those remaining assert that the U.S. economy is in rude health, with the consensus forecasting GDP growth of 2.2% this year and 1.7% in 2020. Further, wage growth is currently running at a 3% nominal pace that, even though it is a lagging indicator, suggests a positive outlook for consumption over coming

GLOBAL STRATEGIES

U.S. STRATEGIES

ORGANIZATIONAL UPDATES

Timothy Taussig

As previously announced, Epoch co-founder, President and COO Tim Taussig retired at the end of 2018. Tim helped transform a startup with high ideals into a world-class firm that continues to deliver on its founding principles of free-cash-flow investing and meeting client needs. He began transitioning his responsibilities to Epoch's new President and COO Philipp Hensler in August and served as a senior advisor until December 31. We wish Tim the best of luck in retirement.

Spotlight *(continued)*

attractive and consistent earnings and cash flow growth, often in the range of middle to high single digits. These growth rates, particularly in the years post-GFC, have often been higher than the nominal GDP growth rates achieved by the countries in which the companies operate.

QUESTION. *How did these companies generate that growth without selling more kilowatt-hours of electricity?*

ANSWER. The utilities industry is partly regulated and partly unregulated. Due to the monopolistic nature of certain utility assets, such as electric transmission grids and natural gas pipelines, these assets are highly regulated for price control. The unregulated side of the industry has been highly competitive and, thus, growth has been challenging for the companies in those markets. We have been focusing our investments on the regulated side of the industry, where several secular factors have been driving the growth of utility rate bases, earnings and cash flow. These factors are aging infrastructure, the emergence of renewables, the shale revolution and digitization.

QUESTION. *How can aging infrastructure be a positive driver?*

ANSWER. Aging energy infrastructures are less reliable and often cause severe social, economic or environmental impact when they fail. A blackout in New York City, for example, could cause billions of dollars of economic damage. As a result, regulators, who are responsible for reliability, have required the utility companies to upgrade their aging infrastructures. As these upgrades are capital intensive, regulators are obliged to grant the companies favorable terms, such as allowed rates of return and other incentives that will allow them to attract investments, while at the same time mitigating the impact on the consumer's utility bills. This balancing act has led to lasting capital programs that contribute to the growth of rate bases, which the utility companies use to drive earnings and cash flow growth.

QUESTION. *How are renewables beneficial for utilities?*

ANSWER. Non-hydro renewable sources of energy, such as wind and solar, grew significantly in the last 10 years and have become an integral part of the energy resource mix. Their growth was driven by country or state environmental targets, government incentives and a drastic fall in component costs in recent years. To support the development of renewables, utility companies are tasked with building new transmission lines to connect the new energy sources to the power grids. Capital spending on the new transmission lines, together with the required system upgrades to accommodate and optimize flows on the grid, are added to the rate bases, driving additional earnings and cash flow growth.

QUESTION. *What about the shale revolution?*

ANSWER. The advancement of oil and gas production technology, notably horizontal drilling and hydraulic fracturing, has led to a great abundance of natural gas in North America. As a result, natural gas prices have been in a steady decline over the last 10 years. Cheap natural gas has stimulated demand. Residential customers have been switching from oil to natural gas for home heating during the winter. More and more power generation has switched from coal to natural gas. Utility companies, during this energy transition, benefited in multiple ways, such as building long-haul pipelines to gas producing shale, constructing new gas distribution lines to homes, and adding new gas power plants to their generation mix. Capital spending associated with these activities is added to their rate bases and again contributes to growth.

QUESTION. *Epoch has spoken often about tech being the new macro, but how does that affect utilities?*

ANSWER. Digitization has had a large impact on the industry. Digitization of energy consumption starts with smart meters, for both electricity and gas transmission and distribution networks. Smart meters not only automate the meter reading, significantly reducing the costs of dispatching human readers, but also improve the speed of emergency responses by quickly identifying the location and scale of outages. Smart meters can also detect and measure the two-way flow of electricity, making the distributed generation by rooftop solar feasible. Time-of-use rates that allow consumers to pay less at off-peak hours will only be possible with smart meters. Utility companies are rolling out smart meters and getting incremental growth from the investments.

QUESTION. *Is the growth expected to continue?*

ANSWER. We believe that the growth will continue, as the aforementioned drivers will still be valid for many years to come. Tens of thousands of miles of transmission and

distribution lines still need to be replaced or upgraded. Renewables are still in the early innings of development. Natural gas abundance continues to benefit consumers and industries. Finally, while smart meters will eventually saturate, digitization is still ongoing.

In addition, new growth drivers are emerging. Utility companies are just starting to get approvals to put wind and solar power facilities into their rate bases. As technology advances and costs come down, renewables are becoming more competitive even without government incentives. As this trend continues, it will drive further rate-based renewables growth by the utility companies. Also, as battery costs keep coming down, we view the mass adoption of electric vehicles as a question of when, not if. Electric vehicles will switch transportation fuel from carbon-emitting hydrocarbons to electrons. This inevitably leads to a significant growth in power consumption. New power generation facilities will need to be built and added to the rate bases, hopefully with an even higher mix of renewables. This will also require the expansion of transmission and distribution capacities to handle higher charging throughput. Time-of-use rates may become mainstream.

QUESTION. *What are the implications for investors?*

ANSWER. The characteristics of the utilities' growth are unique. They are independent of electricity consumption, have multi year visibility from the rate-making process, and offer low correlation with, yet often higher rates than, GDP growth. The utilities sector also has low beta, providing a risk-reduction benefit to portfolios. For our shareholder yield strategies in particular, we favor those utility companies that operate in constructive regulatory environments, where regulators understand the need for investment and offer attractive allowed returns to properly compensate capital providers. We also look for management teams that have the operational track record of consistently delivering the projects and the associated growth.

Michael's primary focus is on Epoch's Equity Shareholder Yield strategies. Prior to joining Epoch in 2010, Michael was a research analyst at AllianceBernstein. Prior to Bernstein, Michael worked as a corporate finance consultant at McKinsey and a process engineer at Praxair. He received his MBA from the University of Chicago, an MS from SUNY Buffalo and Notre Dame, and completed his undergraduate study at the University of Science and Technology of China.

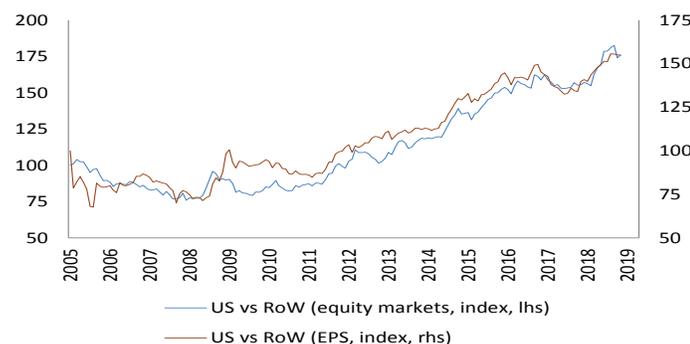

Quarterly Investment Update *(continued)*

quarters. Moreover, Factset anticipates S&P 500 earnings growth of just under 7% in 2019. This implies a promising backdrop, especially given that the U.S. equity market is trading close to fair value (for example, on a FCF yield of 5.3%, marginally above its historical mean of 5.2%) and total shareholder yield is expected to end 2019 about 150 bps above the 10-year bond yield.

An additional, more tactical factor bolsters the optimistic case. At the beginning of the year, a 50-60% probability of a U.S. recession was being implied by a trio of market variables (the flattening yield curve, widening corporate spreads and Q4's equity market plunge). While we believe a mild recession is more likely than not over the next three years, it is utterly impossible to predict the timing with any level of precision. That is to say, while economic and earnings momentum have certainly deteriorated, equity markets appear to have overreacted last quarter. Such behavior reminds us of Professor Samuelson's quip that "The stock market has forecast nine of the last five recessions."

Further, during recent quarters the market has increased its focus on risks around the outlook for Europe, China and elsewhere. While the U.S. is certainly not without its vulnerabilities, it is worth stressing that for most of the last decade the S&P 500 has outperformed the rest of the world. This is principally due to the superior EPS record of U.S. companies (figure 1), which in turn reflects two driving influences: first, the country's superior macro performance (since the beginning of the decade, nominal U.S. GDP has expanded by 50% more than the eurozone's and by four times as much as Japan's), and second, its much higher weighting in technology. We have written extensively on our "tech is the new macro" theme, which emphasizes that the ability of companies to generate FCF is increasingly dependent on how they adapt their business models to the digital age. These two factors are likely to remain key drivers so, even as U.S. momentum decelerates, we expect it to outperform other markets globally.

FIGURE 1: U.S. MARKET OUTPERFORMANCE REFLECTS SUPERIOR EPS GROWTH

Quantitative Frightening

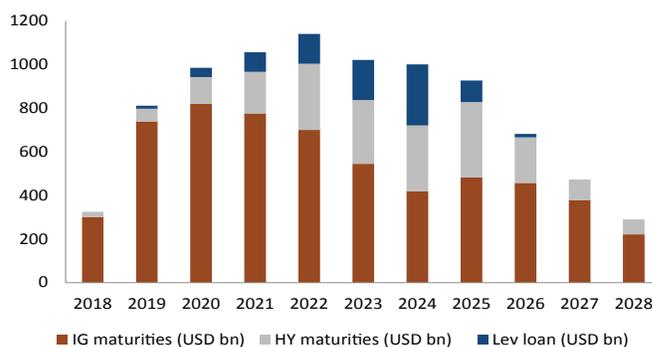

However, the rosy perspective outlined above is counterbalanced by four worrisome developments, each of which came to the fore last year and will likely remain in play through 2019 and beyond. The first is the impact of the transition from QE to QT. Although QT is not a new theme, it finally started to have a real impact on markets last year, partially because the ECB joined in and finally completed its QE program. Since most studies, including those undertaken by the Fed, have found that QE reduced yields on 10-year Treasuries by about 100 bps, there is much concern about the Fed's stated plan to unwind the program on autopilot. In particular, if the impact of QT is symmetrical, it could pose a major negative for equity markets, especially for long-duration stocks.

The second concern is the huge Treasury funding required to finance both the fiscal deficit (likely to break through \$1 trillion this year, and then keep rising) and to absorb the securities being sold through QT (up to \$600 billion annually). The Treasury has only previously faced funding needs on this scale during wartime or recession as, at this late stage of the cycle, the Treasury's financing needs are typically dwindling, rather than being ramped up. Given this anomalous dynamic, we are worried about the impact on interest rates and the possibility of a sharp tightening in USD liquidity.

Corporate Issuance Soared During the Fed's QE Experiment

Third, over the last decade there has been a massive increase in U.S. corporate issuance, with such debt hitting a record high. However, now the bill is coming due, with 62% of existing IG debt maturing within the next five years (figure 2). Further, the average riskiness of outstanding corporate bonds has risen sharply and covenant-lite debt has become the new normal. Credit will likely constitute the epicenter of the next market crisis, with particular concern regarding CLOs and fallen angels (which are likely to overwhelm the liquidity available in HY, given the enormity of today's BBB market).

FIGURE 2: U.S. MATURITY WALL: CORPORATE BONDS

Source: Goldman Sachs

Taken together, the first three risk factors suggest a strong possibility of higher interest rates, tighter financial conditions and rising volatility in coming quarters. Further, while QE was associated with dramatic multiple expansion, the transition to QT, especially when compounded by the unprecedented issuance of Treasuries and the maturity wall facing corporate bonds, suggests that equity multiples are highly unlikely to rise any further.

The fourth development is the recognition that no one wins a trade war (a subject we have written much about). The Trump administration has taken a particularly hard line toward China, with the soft deadline of March 1 quickly approaching. The new “trade architecture” will almost certainly involve greater exports of agriculture and energy commodities. Additionally, China has already passed legislation to improve IP protection, although we are skeptical that it will be enforced effectively. Equally importantly, China will promise to scale back subsidies and improve market access for U.S. firms, although these are likely to be empty promises, made to buy time. As a result, a tentative agreement may be reached, but that it will satisfy few. Consequently the deadline is likely to be extended, as negotiations continue, on a sporadic basis, with conflict re-escalating, possibly in early-2020.

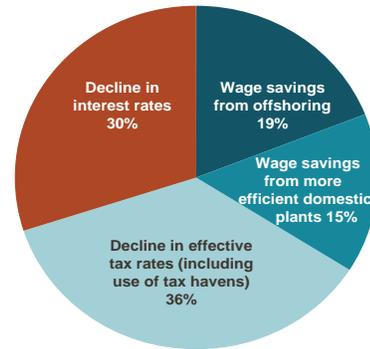

The “Grand Débat”: From the Quotidian to the Existential
 An additional concern, albeit one that is difficult to express in terms of probabilities and specific market impact, is that the global liberal order is coming apart. When you simultaneously challenge social norms and many of the values that anchor people — a sense of home, job security and the prospects for growth — and amp it up with social media networks, you get serious blowback, as we are seeing in France with the “gilets jaunes” and Britain with Brexit.

Since WWII, the liberal global order has spread more freedom and prosperity around the world than during any other period in history, but is now under duress. The pillars of this order are being shaken by insurgencies of the working poor and anxious middle classes that have benefited little from the surges in globalization, immigration and technology that have served places such as London, Paris, San Francisco and New York so profoundly well. The high-wage, middle-skilled jobs often held by this group are giving way to robotics, AI, outsourcing and Chinese imports. It is hard to see how this can end in a constructive way.

Margins, Like Multiples, Have Almost Certainly Peaked
 Manufacturing margins were flat for decades at around 6%, but they have doubled since 2000, with four factors explaining most of the expansion (figure 3): labor arbitrage derived from China entering the WTO, the evolution of complex and highly efficient global supply chains, lower corporate tax rates and declining interest rates. While lower taxes may be here to stay, the other three are reversing direction, in large part due to rising trade

tensions and the transition to QT. When the movie *The Law of Comparative Advantage* is run backward, the outcome is a lose/lose relationship for everyone. Thus, we expect profit margins to struggle and market multiples to fall or at best remain flat.

FIGURE 3: THE DOUBLING OF MANUFACTURERS’ MARGINS SINCE 2000 CAN BE ATTRIBUTED TO FOUR FACTORS

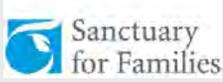

Source: *Empirical Research Partners*

We began this note discussing three factors that suggest a more optimistic outlook on equity markets in 2019. However, as we enter the new year we are mindful that the QE experiment and plentiful liquidity that supported valuations and suppressed volatility for most of the last decade has now reversed and is moving resolutely in the other direction. Declining liquidity implies less support for equity multiples and a higher level of volatility, making a company’s ability to generate consistent FCF increasingly important. We believe our investment approach is well-suited to this environment, where investment returns are more closely linked to company fundamentals. As always, we seek companies that can generate a growing stream of FCF and can allocate that cash effectively for the benefit of shareholders.

Epoch and Its Employees Are Proud to Support:

Throughout the year, Epoch’s Charitable Giving Committee coordinates opportunities for our employees to volunteer their time and money to give back to our community.

Food Drive and Adopt a Family

sanctuaryforfamilies.org

Sanctuary for Families is New York’s leading service provider for survivors of domestic violence, sex trafficking and gender violence. Epoch employee donations exceeded our goals and will stock the organization’s pantry for more than a full month.

Coat Drive and Operation Backpack

newyorkcares.org

New York Cares is an organization that meets pressing community needs by mobilizing caring New Yorkers in volunteer service. Among the programs in which Epoch employees participated in 2018 were the Annual Coat Drive and Operation Backpack. For Operation Backpack employees stuffed over 100 backpacks for needy children with school supplies purchased by Epoch.

Matching Gift Program

Epoch matches employee donations to eligible organizations of their choice. These organizations can include nonprofit charitable health care, educational, civic and cultural organizations.

Epoch is honored to make additional donations to:

Chosen by the Charitable Giving Committee		A comprehensive youth development organization that makes a 10-year commitment to children from underserved communities throughout New York City and central New York. Through character-building summer and year-round out-of-school time programs, Fiver empowers children to make ethical and healthy decisions, to become engaged citizens, and to succeed in school, careers and life. www.fiver.org
		Caring for animals in need when illness, injury or homelessness strikes. On any day the Humane Society of New York is responsible for hundreds of animals with diverse needs. For many, the Society is the only place they will find help. www.humanesocietyny.org
		A leader in the global fight to eradicate modern slavery. Polaris systemically disrupts the human trafficking networks utilizing data and technology, and helps survivors restore their freedom. www.polarisproject.org
Chosen by Vote of Epoch’s Employees		Group that delivers emergency medical aid to people affected by conflict, epidemics, disasters or exclusion from health care. www.doctorswithoutborders.org
		Works to strengthen the emotional, social and academic skills of at-risk children to help them succeed in school, society and life. Partnership with Children provides trauma-informed counseling, crisis intervention, schoolwide services, and family and community outreach to New York City’s public school students who are at the highest risk of academic failure and dropout. www.partnershipwithchildren.org

1. Presentation of the Firm — Epoch Investment Partners, Inc. is a wholly owned subsidiary of The Toronto Dominion Bank. Epoch Investment Partners, Inc. ("Epoch") became a registered investment adviser under the Investment Advisers Act of 1940 in June 2004. Performance from April 2001 through May 2004 is for Epoch's investment team and accounts while at a prior firm. Performance from July 1994 through March 2001 is for Bill Priest and the accounts while at a different prior firm. For both time periods, Bill or the investment team were the only individuals responsible for selecting the securities to buy and sell. Epoch has the books and records supporting the performance of this track record and will provide these records upon request. Epoch Investment Partners, Inc. claims compliance with the Global Investment Performance Standards (GIPS®).
2. Composite Structure — Epoch's composites include all tax-exempt and taxable portfolios above \$500,000 in size and are generally managed relative to an applicable market index. Results are based on fully discretionary accounts under management, including those accounts no longer with the firm. Where indicated, the changes to benchmarks or composites, noted below, were made to present a more representative and insightful comparison to the investment strategies. Also noted below, are the composite descriptions for each strategy offered at Epoch Investment Partners, Inc.

COMPOSITE	CREATION DATE	CURRENT BENCHMARK	COMPOSITE DESCRIPTION	
U.S. Value	June 2004	Russell 1000; Russell 1000 Value; S&P 500	U.S. Value is a value-oriented equity portfolio managed by Epoch for long-term appreciation through investment in large-capitalization U.S. companies. Epoch employs a research process focused on free-cash-flow generation as opposed to traditional accounting-based metrics such as P/E or P/B. As long-term-oriented conviction investors, the portfolio consists of approximately 40-60 securities which provides concentration with diversification, and typically limits the market capitalization of the securities in the portfolio to that of the Russell 1000 at time of purchase. The companies are selected based on their ability to generate free cash flow and to allocate it accretively among internal reinvestment opportunities, acquisitions, dividends, share repurchases and/or debt pay downs.	
U.S. All Cap Value	June 2004	Russell 3000; Russell 3000 Value	U.S. All Cap Value is a value-oriented equity portfolio managed by Epoch for long-term appreciation through investment in large-, medium- and small-capitalization U.S. companies. Epoch employs a research process focused on free-cash-flow generation as opposed to traditional accounting-based metrics such as P/E or P/B. As long-term-oriented conviction investors, the portfolio consists of approximately 50-80 securities which provides concentration with diversification, and typically limits the market capitalization of the securities in the portfolio to that of the Russell 3000 at time of purchase. The companies are selected based on their ability to generate free cash flow and to allocate it accretively among internal reinvestment opportunities, acquisitions, dividends, share repurchases and/or debt pay downs. Effective 7/1/06, the U.S. All Cap Value Composite has been redefined to reflect only those discretionary accounts managed by the All Cap Value Team and following the respective All Cap Value model. As a result, all accounts which are not managed by the All Cap Value Team and have specified client risk preferences have been removed.	
U.S. Small Cap Value	June 2004	Russell 2000; Russell 2000 Value	U.S. Small Cap Value is a value-oriented equity portfolio managed by Epoch for long-term appreciation through investment in small-capitalization U.S. companies. Epoch employs a research process focused on free-cash-flow generation as opposed to traditional accounting-based metrics such as P/E or P/B. As long-term-oriented conviction investors, the portfolio consists of approximately 60-90 securities which provides concentration with diversification, and typically limits the market capitalization of the securities in the portfolio to that of the Russell 2000 at time of purchase. The companies are selected based on their ability to generate free cash flow and to allocate it accretively among internal reinvestment opportunities, acquisitions, dividends, share repurchases and/or debt pay downs.	
U.S. SMID Cap Value	September 2006	Russell 2500; Russell 2500 Value	U.S. SMID Cap Value is a value equity portfolio managed by Epoch for long-term appreciation through investment in small and mid-capitalization U.S. companies. Epoch employs a research process focused on free-cash-flow generation as opposed to traditional accounting-based metrics such as P/E or P/B. As long-term-oriented conviction investors, the portfolio consists of approximately 60-90 securities which provides concentration with diversification, and typically limits the market capitalization of the securities in the portfolio to that of the Russell 2500 at time of purchase. The companies are selected based on their ability to generate free cash flow and to allocate it accretively among internal reinvestment opportunities, acquisitions, dividends, share repurchases and/or debt pay downs.	
U.S. Choice	May 2005	Russell 3000	U.S. Choice is a value equity portfolio managed by Epoch for long-term appreciation through investment in businesses that reflect the high conviction ideas of all of Epoch's U.S. strategies. Epoch employs a research process focused on free-cash-flow generation as opposed to traditional accounting-based metrics such as P/E or P/B. As long-term-oriented conviction investors, the portfolio consists of approximately 20-35 securities which provides concentration with diversification, and typically limits the market capitalization of the securities in the portfolio to that of the Russell 3000 at time of purchase. The companies are selected based on their ability to generate free cash flow and to allocate it accretively among internal reinvestment opportunities, acquisitions, dividends, share repurchases and/or debt pay downs.	
U.S. Equity Shareholder Yield	July 2012	Russell 1000 Value	U.S. Equity Shareholder Yield Composite contains fully discretionary diversified portfolios of U.S. equity securities managed by Epoch for above average income and long-term capital appreciation. Epoch employs a research process focused on free-cash-flow generation as opposed to traditional accounting based metrics such as P/E or P/B. The portfolio consists of approximately 75-120 securities which are selected on the expectation they will generate excess free cash flow and whose management will allocate it prudently among dividends, share repurchases, debt pay downs, internal reinvestment opportunities and/or acquisitions.	
Non-U.S. Equity	August 2008	MSCI EAFE Index (Net)	Non-U.S. Equity pursues long-term capital appreciation by investing in a portfolio of approximately 60-80 stocks primarily from developed markets outside the U.S. As fundamental investors with a long-term orientation, Epoch selects companies based on their ability to generate free cash flow and allocate it effectively for the benefit of shareholders.	
Global All Cap	December 2007	MSCI World (Net)	Global All Cap pursues long-term capital appreciation by investing in a portfolio of 60-80 stocks across a broad range of market capitalizations. As fundamental investors with a long-term orientation, we select companies based on their ability to generate free cash flow and allocate it intelligently for the benefit of shareholders. Our bottom-up security selection process is balanced with diversification and risk control measures designed to ensure below-average portfolio volatility.	
Global Equity Capital Reinvestment	June 2013	MSCI World Index (Net)	Global Equity Capital Reinvestment strategy seeks to invest in a diversified portfolio of companies who can sustainably allocate capital, at attractive returns, to internal projects and/or acquisitions as the dominant ways of generating shareholder value. This strategy will seek to invest in companies that consistently generate ROIC above their WACC and have a history of value creating M&A, growth capital expenditures, and/or R&D investments.	
COMPOSITE	CREATION DATE	CURRENT BENCHMARK	PREVIOUS BENCHMARK HISTORY	COMPOSITE DESCRIPTION
Global Equity Shareholder Yield	January 2006	MSCI World (Net)	Effective 7/1/2009, performance information for these composites is shown comparative to the MSCI World (Net) indices, respectively, on a current and retrospective basis. The benchmark previous to 7/1/2009 was the S&P Developed BMI Index.	Global Equity Shareholder Yield is a diversified portfolio of global equity securities managed by Epoch for above average income and long-term capital appreciation. Epoch employs a research process focused on free-cash-flow generation as opposed to traditional accounting based metrics such as P/E or P/B. The portfolio consists of approximately 90-120 securities which are selected on the expectation they will generate excess free cash flow and whose management will allocate it prudently among dividends, share repurchases, debt pay downs, internal reinvestment opportunities and/or acquisitions.
Global Choice	October 2005	MSCI World (Net)	Effective 1/2009, the benchmark was changed for the Global Absolute Return and Global Choice composites from the MSCI World (Gross) Index to the MSCI World (Net) Index because it is more representative of the firm's accounting methodology with regards to foreign withholding tax treatment.	Global Choice is a concentrated portfolio of global equity securities managed by Epoch for longer term capital appreciation. Epoch employs a research process focused on free-cash-flow generation as opposed to traditional accounting based metrics such as P/E or P/B. The portfolio consists of approximately 25-35 securities which are selected on the expectation they will generate excess free cash flow and whose management will allocate it prudently among internal reinvestment opportunities, acquisitions, dividends, share repurchases and/or debt pay downs.
Global Absolute Return	June 2004	Barclays Capital U.S. Aggregate and MSCI World (Net)	Effective 5/2015, the S&P 500 Index has been removed as a benchmark as it is no longer being used for comparative purposes. Effective 1/2009, the benchmark was changed for the Global Absolute Return and Global Choice composites from the MSCI World (Gross) Index to the MSCI World (Net) Index because it is more representative of the firm's accounting methodology with regards to foreign withholding tax treatment.	Global Absolute Return is a concentrated portfolio of global equity securities managed by Epoch for longer term capital appreciation. Cash is actively used to limit loss exposure. Epoch employs a research process focused on free-cash-flow generation as opposed to traditional accounting based metrics such as P/E or P/B. The portfolio consists of approximately 25-35 securities which are selected on the expectation they will generate excess free cash flow and whose management will allocate it prudently among internal reinvestment opportunities, acquisitions, dividends, share repurchases and/or debt pay downs.
Non-U.S. Small Cap	February 2005	MSCI World ex-USA Small Cap (Net)	Effective July 1, 2017, the International Small Cap Composite name has been changed to the Non-U.S. Small Cap Composite. Effective 7/1/2009, performance information for these composites is shown comparative to the MSCI World ex-USA Small Cap (Net) respectively, on a current and retrospective basis. The benchmark previous to 7/1/2009 was the S&P EPAC Small Cap Index.	International Small Cap is a diversified portfolio of non-U.S. small cap stocks managed by Epoch for long term capital appreciation. Epoch employs a research process focused on free-cash-flow generation as opposed to traditional accounting based metrics such as P/E or P/B. The portfolio consists of approximately 125-175 securities which are selected on the expectation they will generate excess free cash flow and whose management will allocate it prudently among internal reinvestment opportunities, acquisitions, dividends, share repurchases and/or debt pay downs.
Global Small Cap	June 2004	MSCI World Small Cap (Net)	Effective 7/1/2009, performance information for these composites is shown comparative to the MSCI World Small Cap (Net) respectively, on a current and retrospective basis. The benchmark previous to 7/1/2009 was the S&P Developed Small Cap Index.	Global Small Cap is a diversified portfolio of global small cap stocks managed by Epoch for long term capital appreciation. Epoch employs a research process focused on free-cash-flow generation as opposed to traditional accounting based metrics such as P/E or P/B. The portfolio consists of approximately 150-200 securities which are selected on the expectation they will generate excess free cash flow and whose management will allocate it prudently among internal reinvestment opportunities, acquisitions, dividends, share repurchases and/or debt pay downs.

3. Risk Statistics Source — The composite dispersion presented is an asset-weighted standard deviation calculated for the accounts in the composite the entire period. Sharpe ratio is a measure of absolute risk adjusted return developed by Professor William Sharpe. It divides the excess return of an account above cash returns by the Standard Deviation of the excess return to determine the reward per unit of risk. Information Ratio is a measure of relative risk-adjusted return. It is determined by dividing excess return by Tracking Error. Alpha is a measurement of the expected residual return adjusted for the account Beta. Beta is a quantitative measure of the volatility of the account relative to the account benchmark. R-squared is a measure of how closely an account's performance correlates with the performance of the account benchmark, ranging from 0, indicating no correlation, to 1, indicating perfect correlation. Composite-level risk statistics are calculated using monthly rates-of-return. Statistics calculated using a sample of less than 36 months can be considered a less reliable estimate of the characteristic's true value.

4. Benchmark Source — Russell Investments; MSCI Inc.; Standard & Poor's; and Barclays Capital are the source and owners of the index data contained herein (and all trademarks related thereto), which may not be redistributed. Reference to an index does not imply that the portfolio will achieve returns, volatility or other results similar to the index. The composition of the indices are provided for your information only and may not reflect the manner in which a portfolio is constructed in relation to expected or achieved returns, portfolio guidelines, restrictions, sectors, correlations, concentrations, volatility or tracking error targets, all of which are subject to change over time. Indices are unmanaged. The figures for each index reflects the reinvestment of dividends but do not reflect the deduction of any fees or expenses which would reduce returns except for the MSCI (Net) indices where net total return indices reinvest dividends after the deduction of withholding taxes, using (for international indices) a tax rate applicable to non-resident institutional investors who do not benefit from double taxation treaties. Investors cannot invest directly in indices.

5. Total Return Methodology — Valuations are computed and performance is reported in U.S. dollars. Composite returns are presented gross and net of management fees and include the reinvestment of all income. Gross-of-fees returns are presented before management fees but after all trading expenses. Net performance reflects the gross-of-fees return reduced by the investment management fee and performance-based fee (where applicable) incurred. Effective 1/2008, net performance is calculated by deducting the actual investment management fee incurred by each portfolio in the composite. Prior to 1/2008, net-of-fees returns reflect the deduction of the highest annual management fee, calculated on a monthly basis. Returns include the effect of foreign currency exchange rates. Composite and benchmark (international indices) returns are presented net of non-reclaimable withholding taxes. Periods over one year are annualized. Internal dispersion is calculated using an asset-weighted standard deviation of annual gross returns of those accounts that were included in the composite for the entire year. Internal dispersion figures that are not meaningful due to the limited number of accounts in the composite are annotated by N/A. The three-year annualized standard deviation measures the variability of the composite and the benchmark returns over the preceding 36-month period. Policies for valuing portfolios, calculating performance, and preparing compliant presentations are available upon request. Past performance is not indicative of future results. An account could incur losses as well as gains.

6. Significant Cash Flow Policy — Effective January 1, 2008, Epoch does not apply a significant cash flow policy as all accounts are valued daily. From January 1, 2006 to December 31, 2007, Epoch defined a significant cash flow as one in excess of 25% of the portfolio market value. Prior to January 1, 2006 Epoch's policy required the temporary removal of any portfolio incurring a client initiated significant cash flow of 10% or greater of portfolio market value. Additional information regarding the Epoch's historical treatment of significant cash flows is available upon request.

7. To receive a complete list and description of Epoch's composites, GIPS® firm-wide verification or composite examination reports by ACA Compliance Group from June 21, 2004 through September 30, 2018 and/or other presentations that adhere to the GIPS® standards, contact us at 212-303-7200, write to Epoch Investment Partners Inc., 399 Park Avenue, New York, NY 10022, or send an email to info@eipny.com.
