

Non-U.S. Choice

THIRD QUARTER 2022

Non-U.S. Equity Choice seeks to provide superior total and risk-adjusted returns by investing in a concentrated portfolio of companies domiciled outside the U.S.

Key Components of the Non-U.S. Choice Strategy

A concentrated portfolio that benefits from proprietary research that drives our Non-U.S. strategies; a majority of positions are high convictions in our other strategies

Investments in companies with strong free cash flow and effective capital allocation policies

Disciplined process combines the judgment and experience of fundamental investors with the rigor and objectivity of quantitative insights

Portfolio construction framework designed to minimize unintended risks, reduce volatility, and emphasize security selection risk as the primary source of risk

Broad exposure to countries and sectors with portfolio performance driven by individual security selection

Cash-flow-oriented approach complements other managers within an overall asset allocation plan

Investment Philosophy

Epoch believes that the best predictors of long-term shareholder return are growth in free cash flow and management's skill in allocating that cash.

We prefer cash flow to earnings for three reasons. First, cash flows are more reliable than reported earnings because they are harder to manipulate under accounting rules. Second, for innovative businesses which derive much of their economic value from intangible assets,

reported earnings have become increasingly less relevant as a measure of value generation compared to cash flows. Third, businesses which appear to generate reported earnings but not cash flows are more likely to run into financial distress.

Capital allocation matters because decisions on how to allocate cash flows—whether to reinvest in order to grow a company, or to return capital to shareholders—can create or destroy long-term shareholder value.

Strategy Approach and Investment Process

The Epoch Non-U.S. Equity Choice strategy pursues long-term capital appreciation by investing in a concentrated portfolio, typically consisting of 30-50 stocks domiciled outside of the United States. As fundamental investors with a long-term orientation, Epoch selects companies based on their ability to generate free cash flow and allocate it intelligently for the benefit of shareholders.

The investment process begins with a broad universe of over 6,000 non-U.S. companies in both developed and emerging markets. This investment universe is filtered down to approximately 2,000 stocks based on market cap and liquidity constraints. From this investable universe, we identify potential research candidates through meetings with companies, suppliers, customers, their peers, conferences, and trade shows. Our team complements fundamental insights with the Epoch Core Model ("ECM"), a proprietary quantitative tool that was developed in-house to systematically express our free-cash-flow investment philosophy. The Non-U.S. investment universe is large, heterogeneous, and complex, and the ECM helps reduce errors of omission by increasing the breadth of coverage and overcoming behavioral biases. The factors used in the model represent the various aspects of our investment philosophy including free cash flow yield, growth in free cash flow, and the quality of management.

Regardless of the ECM score, all securities undergo in-depth fundamental analysis by our research team before ever being recommended for inclusions in a portfolio. For each company, our investment team scrutinizes management's track record of allocating capital, looking for those with the discipline to use free cash flow to maximize return on investment, thereby creating shareholder value. As part of this process, they review the company's business model, industry dynamics, competitive positioning and strategy, free-cash-flow profile, returns on capital, and valuation. In addition, we examine management's historical track record and incentive schemes. All else equal, Epoch prefers management teams that are focused on measures like free cash flow, return on invested capital, and total shareholder return rather than short-term sales and EPS growth measures—which can be flattered by accounting practices but may not translate into true shareholder value creation. Once a stock has been purchased, we regularly revisit our thesis and typically sell the stock if our price target is reached, our thesis changes, or we see another investment with a better risk-reward profile.

While the portfolio is constructed from the bottom up, we consider the macro context when making decisions. Epoch's Investment Policy Group, composed of senior members of our different strategy groups, provides insight and guidance on the global market environment, as well as macroeconomic and industry trends. The end-result is a concentrated, high-conviction, and risk-controlled portfolio that represents the Firm's best ideas domiciled in Non-US markets.

Risk Management

Risk management is integrated throughout the investment process and portfolio risk exposures are monitored and formally communicated to portfolio managers on a regular basis and are discussed at investment meetings. The strategy's portfolio construction framework is designed to minimize unintended risks and reduce volatility, producing an efficient portfolio on a risk-return basis. We employ diversification constraints across major countries and sectors. While the strategy does incorporate the top-down views of our Investment Policy Group, the portfolio's emphasis is on idiosyncratic bottom-up ideas with stock selection as the primary source of risk. Following the selection of a name for inclusion in the portfolio, our team pays careful attention to the sizing of positions. Position sizing reflects both quantitative insights and human judgement along with overall portfolio constraints, objectives, and architecture.

All data as of September 30, 2022 unless otherwise noted. Source: FactSet Research Systems, Inc.; MSCI Inc. Totals may not add due to rounding. Performance for the most recent quarter is preliminary and subject to change. The risk statistics are shown for informational purposes only and are not indicative of future results. Past performance is no guarantee of future results. Valuations are computed and performance is reported in U.S. dollars. Composite returns are presented gross and net of management fees and include the reinvestment of all income. Gross-of-fees returns are presented before management fees but after all trading expenses. Net performance reflects the gross-of-fees return reduced by the investment management fee and performance-based fee (where applicable) incurred. Returns include the effect of foreign currency exchange rates. The statements expressed herein are informed opinions, are as of the date noted, and are subject to change at any time based on market or other conditions. International investments involve special risks including currency fluctuation, long liquidity and different accounting methods and economical and political systems. Securities of smaller companies tend to be more volatile and less liquid than that of large companies. Information about indices allows for the comparison of an investment strategy's results to that of a widely recognized broad market index. There is no representation that such index is an appropriate benchmark for such comparison. Results for an index do not reflect trading commissions and costs. Index volatility may be materially different from a strategy's volatility and portfolio holdings may differ significantly from the securities comprising an index. Past Performance: Any performance information referenced represents past performance and is not indicative of future returns. There is no guarantee that the investment objectives will be achieved.

To the extent the material presented contains information about specific companies or securities, including whether they are profitable or not, it is being provided as a means of illustrating our investment thesis. Each security discussed has been selected solely for this purpose and has not been selected on the basis of performance or any performance-related criteria. Past references to specific companies or securities are not a complete list of securities selected for clients and not all securities selected for clients in the past were profitable. The securities discussed herein may not represent an entire portfolio and, in the aggregate, may only represent a small percentage of clients' holdings. Clients' portfolios are actively managed and securities discussed may or may not be held in such portfolios at any given time.

Projected or Targeted Performance: Any projections, targets, or estimates in this presentation are forward-looking statements and are based on Epoch's research, analysis, and its capital markets assumptions. There can be no assurances that such projections, targets, or estimates will occur and the actual results may be materially different. Additional information about capital markets assumptions is available upon request. Other events which were not taken into account in formulating such projections, targets, or estimates may occur and may significantly affect the returns or performance of any accounts and/or funds managed by Epoch.
