

U.S. Choice

THIRD QUARTER 2022

U.S. Choice seeks superior and risk-adjusted returns by investing in a concentrated portfolio of U.S. companies

Key Components of the U.S. Choice Strategy

A concentrated portfolio of 25-35 companies that are the highest conviction ideas of Epoch's U.S. investment team

Latitude to invest across the market capitalization spectrum to take advantage of evolving valuation opportunities

Disciplined process combines the judgment and experience of fundamental investors with the rigor and objectivity of quantitative insights

Invests in companies with strong free cash flow and intelligent capital allocation policies; offers low correlations with growth, value, and other accounting-based styles

Portfolio construction framework designed to minimize unintended risks, reduce volatility, and emphasize security selection risk as the primary source of risk

Free cash flow approach expected to provide attractive balance of performance and downside protection

Investment Philosophy

Epoch believes that the best predictors of long-term shareholder return are growth in free cash flow and management's skill in allocating that cash.

We prefer cash flow to earnings for three reasons. First, cash flows are more reliable than reported earnings because they are harder to manipulate under accounting rules. Second, for innovative businesses which derive much of their economic value from intangible assets,

reported earnings have become increasingly less relevant as a measure of value generation compared to cash flows. Third, businesses which appear to generate reported earnings but not cash flows are more likely to run into financial distress.

Capital allocation matters because decisions on how to allocate cash flows—whether to reinvest in order to grow a company, or to return capital to shareholders—can create or destroy long-term shareholder value.

Strategy Approach and Investment Process

The U.S. Choice strategy seeks long-term capital appreciation by investing in a concentrated portfolio of 20–35 U.S. companies possessing superior risk-return profiles. Companies are selected for their ability to generate free cash flow and allocate it intelligently to benefit shareholders. The U.S. Choice strategy represents the highest conviction ideas from our capitalization-specific U.S. strategies. The portfolio management team has latitude to invest across the market capitalization spectrum. Companies are selected for their ability to generate free cash flow and allocate it intelligently to benefit shareholders. Our bottom-up security selection process is balanced with risk control measures designed to achieve below-average portfolio volatility.

Our process begins by identifying candidates for investment from a universe of common stocks generally consisting of companies in the Russell 3000 Index, although the strategy has the flexibility to invest outside the Index. We look for companies that generate free cash flow, have little debt relative to their competitors (or are deleveraging), and possess managements with a history of capital allocation decisions that have increased shareholder value.

From the investable universe, we develop a focused list of investment candidates sourced

by our qualitative insights, quantitative tools, and macroeconomic observations. Analysts leverage their deep industry knowledge and experience to identify potential research candidates through meetings with companies, suppliers, customers and peers, as well as conferences and trade shows. We complement our fundamental insights with the Epoch Core Model ("ECM"), a proprietary quantitative tool that expresses and reinforces, in quantitative terms, the economic logic behind Epoch's fundamental research, seeking out companies headed by capable managements that are able to consistently generate and grow free cash flow. The ECM evaluates each stock in our investment universe according to five broad investment characteristics—Quality, Valuation, Growth, Capital Allocation, and Investor Behavior—which we believe drive company fundamentals and security prices.

Fundamental research is carried out on potential investments and portfolio holdings by our veteran team of research analysts and portfolio managers. We develop an investment thesis as we assess the sources of the company's long-term value creation and management's ability to nurture it. We scrutinize management's track record of allocating capital, looking for those with the discipline to use free cash flow to maximize return on investment, thereby creating shareholder value. We also evaluate each company's business model and financial statements, as well as its operating environment and valuation. Once a stock has been purchased, we regularly revisit our thesis

and typically sell or trim a stock if our price target is reached, our thesis changes, or we see another investment with a better risk reward profile. We will sell a position outright if our investment thesis has been compromised due to a change in the company's strategy, business conditions, or the competitive environment.

While the portfolio is constructed from the bottom up, we also consider the macro context while making investment decisions. Epoch's Investment Policy Group, composed of senior members of our different strategy groups, provides insight and guidance on the global market environment as well as macroeconomic and industry trends.

Risk Management

Risk management is integrated throughout the portfolio construction process as we seek to produce an efficient portfolio on a risk/return basis. The portfolio is diversified across economic drivers of return, individual position sizes are limited to 10% of the portfolio, and the strategy employs a strict sell discipline. We do not have strict sector limits but are aware of our sector and industry exposures through our risk management process. Position sizes are determined by the portfolio managers with input from the analyst and our Quantitative Research and Risk Management Team and are inversely related to the risk presented by each individual security within the context of the overall portfolio.

All data as of September 30, 2022 unless otherwise noted. Source: FactSet Research Systems, Inc.; Frank Russell Company ("Russell"). Totals may not add due to rounding. Performance for the most recent quarter is preliminary and subject to change. The risk statistics are shown for informational purposes only and are not indicative of future results. Past performance is no guarantee of future results. Valuations are computed and performance is reported in U.S. dollars. Composite returns are presented gross and net of management fees and include the reinvestment of all income. Gross-of-fees returns are presented before management fees but after all trading expenses. Net performance reflects the gross-of-fees return reduced by the investment management fee and performance-based fee (where applicable) incurred. Effective January 2008, net performance is calculated by deducting the actual investment management fee incurred by each portfolio in the composite. Prior to January 2008, net-of-fee returns reflect the deduction of the highest annual management fee, calculated on a monthly basis. Returns include the effect of foreign currency exchange rates. The statements expressed herein are informed opinions, are as of the date noted, and are subject to change at any time based on market or other conditions. International investments involve special risks including currency fluctuation, long liquidity and different accounting methods and economical and political systems. Securities of smaller companies tend to be more volatile and less liquid than that of large companies. Information about indices allows for the comparison of an investment strategy's results to that of a widely recognized broad market index. There is no representation that such index is an appropriate benchmark for such comparison. Results for an index do not reflect trading commissions and costs. Index volatility may be materially different from a strategy's volatility and portfolio holdings may differ significantly from the securities comprising an index. This information is intended to highlight issues and not to be comprehensive or to provide advice only. Past Performance: Any performance information referenced represents past performance and is not indicative of future returns. There is no guarantee that the investment objectives will be achieved.

To the extent the material presented contains information about specific companies or securities, including whether they are profitable or not, it is being provided as a means of illustrating our investment thesis. Each security discussed has been selected solely for this purpose and has not been selected on the basis of performance or any performance-related criteria. Past references to specific companies or securities are not a complete list of securities selected for clients and not all securities selected for clients in the past were profitable. The securities discussed herein may not represent an entire portfolio and, in the aggregate, may only represent a small percentage of clients' holdings. Clients' portfolios are actively managed and securities discussed may or may not be held in such portfolios at any given time.

Projected or Targeted Performance: Any projections, targets, or estimates in this presentation are forward-looking statements and are based on Epoch's research, analysis, and its capital markets assumptions. There can be no assurances that such projections, targets, or estimates will occur and the actual results may be materially different. Additional information about capital markets assumptions is available upon request. Other events which were not taken into account in formulating such projections, targets, or estimates may occur and may significantly affect the returns or performance of any accounts and/or funds managed by Epoch.
